

Case Study

Test Automation with CSharp

“Everyone came away from a great day with an excellent grasp of the automation framework.”
Paul Thompson, QA Manager, Optimum Credit.

Training Received

Crash Course: Test Automation (CSharp)

Business Benefits

- Rapidly skilled up the entire team
- Devs learned automation best practices, from Code Control to Continuous Integration
- Business-ready framework built on the course

Business Challenge

Optimum Credit had fully adopted an Agile approach to Development and now they wanted to automate their Test Phases to meet the fast feedback required by this approach.

Their Development Team had already started putting together a solution. They needed to confirm that they were using best practices and also urgently bring their Test Team up to speed.

Transformation

The Development Team picked up some tips and were re-assured that they were doing the right thing. For the Test Team, everything the Devs were doing suddenly made sense, and they were transformed into a resource that could be used to rapidly increase the number of automation tests.

Follow-on

Optimum Credit are preparing to send members of their team on the BDD (Behaviour-Driven Development) with Cucumber course.

Optimum Credit

Optimum Credit is a leading provider of second charge mortgages for homeowners in England, Wales and Scotland. Optimum's approach to meeting the needs of our customers has seen us advance funds totaling over £300m since launching in June 2014.

Based in Cardiff, they offer a range of variable, fixed and discounted second charge mortgages.

“Greatest strengths of the course: A very good introduction to an Automated Testing framework. Simple to follow and put into practice. Mark Woodman, Senior Test Analyst.

Feedback 5/5

Featured Trainer

Simon Stratton is a Certified Security Testing Professional and Ethical Hacker. As a Technical Tester, he is ISTQB qualified and has been previously employed at IBM, CLS Bank, Fujitsu and EADS/Airbus where he worked on UK national security projects.
