Overview

SAP BW/4HANA is a modern amendment in SAP BW tool which is empowered with advanced features of in-memory HANA database technology that provide fastest warehouse data analysis reports in real time to improve the productivity and growth of any business. SAP BW/4HANA can be deployed either on premise or on cloud according to business need. Apart from high-performance it has many other best features like real-time data analysis, flexibility, data simplicity, and security etc.

SAP BW/4HANA is latest ERP application tool of business warehousing where SAP BW codes are optimized and rewritten to make it compatible on SAP HANA platform, It provides fastest data warehousing environment and real-time data analysis and reporting tools that help in better growth and development of any organization. SAP BW/4HANA application also provides flexible installation platforms as it can be easily installed on-premise or on cloud according to the choice of business owners.

Because SAP BW/4HANA comes with the modern concepts of operation, data management and data modelling, it helps the organization to run more efficiently.

Advancement in the SAP BW ERP application tool has forced many organizations to upgrade their old SAP warehousing application to modern high featured SAP BW/4HANA and because of that, the demand of SAP BW/4HANA consultants has increased.
